

Tear out by HCS: Y/N

Appliances moved by HCS: Y/N

## INSTALLATION HOW TO PLAN/PREP

Remove all items from the top of the cabinets & sink base cabinet.

Any existing countertops must be removed before our installers arrive, unless prior arrangements have been made.

Remove all appliances out of the immediate work area, unless prior arrangements have been made.

*\*If you need assistance, please let us know. We offer moving services at \$250/per appliance.*

Disconnect and turn off the water and gas lines. If the shut-off valves are not functioning properly, you may need to call a certified plumber to make the necessary repairs prior to our arrival.

Electrical power must be available at the job site.

Please clear all people/pets out of the work area. Ideally, it is best to clear the work area entirely for safety/work flow.

***HCS does not reconnect gas, electric or water lines.***

The work performed during countertop installation often creates some dust. We use various methods to confine the dust, however expect some residue.

Our installers will always exercise considerable care while performing tear out services. However, scrapes, punctures, digs to wall surfaces, existing tile or cabinets are possible and sometimes unavoidable. This is considered incidental damage and is the customers responsibility to repair.
